

SmartCoverage, the big difference

The SmartCoverage concept has unique features that make it more effective and future-proof, as it amplifies the signal of each provider separately. We select the bands with the best 4G and 5G signals for each provider, and if the signal changes outside, the system automatically adjusts. Through software updates, the system remains up-to-date.

SmartCoverage is scalable and flexible, suitable for any building in the Netherlands, and the implementation can be done quickly with minimal disruption to business processes.

- ✓ Digital, provider selective and software based, therefore futureproof
- ✓ Scalable, deliverable for buildings from 200 - 200.000 m2
- ✓ Standard remote management
- ✓ Available based on Coax, UTP, fiber, or a combination (hybrid).
- ✓ 100% network safe
